

Package: cptcity (via r-universe)

September 6, 2024

Type Package

Title 'cpt-city' Colour Gradients

Version 1.1.0

Description Incorporates colour gradients from the 'cpt-city' web archive available at
<<http://soliton.vm.bytemark.co.uk/pub/cpt-city/>>.

Depends R (>= 2.10)

Imports grDevices

License GPL-3

cpt *Function to return colour palettes functions from 'cpt-city'*

Description

This function return a color palette based on the name or position of the palette.

Usage

```
cpt(  
  pal = "mpl_inferno",  
  n = 100,  
  colorRampPalette = FALSE,  
  rev = FALSE,  
  frgb = rep(1, 3)  
)
```

Arguments

pal	Palette of colors available or the number of the position
n	integer; number of colors
colorRampPalette	Logical; to be used in sf and mapview.
rev	Logical; to internally revert order of rgb color vectors.
frgb	Numeric; vector of 3 to change internal rgb composition. The order is red, green, blue

Details

The cpt-city web archive comes from: <http://soliton.vm.bytemark.co.uk/pub/cpt-city/index.html>

Value

A colour palette function.

Examples

```
{  
  library(cptcity)  
  image(matrix(1:100), col = cpt(pal = "mpl_inferno"))  
  find_cpt("temperature")  
  image(matrix(1:100), col = cpt("idv_temperature"))  
  image(matrix(1:100), col = cpt("idv_temperature", rev = TRUE))  
  ## Not run:  
  # Do not run  
  library(ggplot2)  
  ggplot(faithfuld, aes(waiting, eruptions)) +
```

```
geom_raster(aes(fill = density))

ggplot(faithfuld, aes(waiting, eruptions)) +
  geom_raster(aes(fill = density)) +
  scale_fill_gradientn(colours = cpt(n = 100))

## End(Not run)
}
```

cptcity

A package to return colour gradients from CPTCITY

Description

Colour palettes comes from <http://soliton.vm.bytemark.co.uk/pub/cpt-city/index.html> Rhw function `cpt` has two arguments `n` for the numbers and `pal` for the name or number of the palette:

Details

The palettes are available here: <http://soliton.vm.bytemark.co.uk/pub/cpt-city/index.html>

cpt_names

Names of the 7140 color gradients of cptcity R Package

Description

This dataset os a vector with al the names of the gradients of the archive cptcity (<http://soliton.vm.bytemark.co.uk/pub/cpt-city/>) availale in this package. Please, read the documentation of each color gradient in the web page shown above.

Usage

```
data(cpt_names)
```

Format

A vector with the 7140 names of the color gradients

Source

<http://soliton.vm.bytemark.co.uk/pub/cpt-city/>

`find_cpt`*Function to return colour palettes names*

Description

`find_cpt` returns the name of the colour gradient that satisfy the search. It is a searcher. It is a mini mini google.

Usage

```
find_cpt(name)
```

Arguments

`name` character; Word to be searched among the names of the cpt gradients.

Value

names that satisfy the search.

Note

This functions runs `grep`.

Examples

```
{
  library(cptcity)
  find_cpt("temperature")
  image(matrix(1:100), col = cpt("idv_temperature"))
  ## Not run:
  library(cptcity)
  # Do not run
  # data names_cpt lazy loaded, already in environment
  library(ggplot2)
  ggplot(faithfuld, aes(waiting, eruptions)) +
  geom_raster(aes(fill = density))

  find_cpt("radar")
  ggplot(faithfuld, aes(waiting, eruptions)) +
  geom_raster(aes(fill = density)) +
  scale_fill_gradientn(colours = cpt(n = 10, "ncl_radar"))

  find_cpt("rain")
  ggplot(faithfuld, aes(waiting, eruptions)) +
  geom_raster(aes(fill = density)) +
  scale_fill_gradientn(colours = cpt(pal = "pj_1_a_rainbow"))

  ## End(Not run)
}
```

lucky	<i>Random colour gradient!</i>
-------	--------------------------------

Description

Based on "I'm Feeling Lucky" from Google. As this package includes 7140 colour gradients, it might be hard to find the 'right'

Usage

```
lucky(  
  n = 100,  
  colorRampPalette = FALSE,  
  rev = FALSE,  
  message = TRUE,  
  nseed,  
  frgb = rep(1, 3)  
)
```

Arguments

n	integer; number of colors
colorRampPalette	Logical; to be used in sf and mapview.
rev	Logical; to internally revert order of rgb color vectors.
message	Logical; for printing or not the name of the colour gradient
nseed	integer; for reproducing the same colour gradient. See set.seed
frgb	Numeric; vector of 3 to change internal rgb composition The order is red, green, blue

Details

The cpt-city web archive comes from: <http://soliton.vm.bytemark.co.uk/pub/cpt-city/index.html>

Value

A RANDOM colour palette function including name of the colour gradient and number.

Examples

```
{  
library(cptcity)  
image(matrix(1:100), col = lucky())  
image(matrix(1:100), col = lucky())  
image(matrix(1:100), col = lucky())  
image(matrix(1:100), col = lucky())  
image(matrix(1:100), col = lucky())
```

```
image(matrix(1:100), col = lucky(rev = TRUE))
image(matrix(1:100), col = lucky(nseed = 1))
}
```

show_cpt

Show me some colors!

Description

`show_cpt` returns a color matrix which prints and show the colors

Usage

```
show_cpt(x, label = TRUE)
```

Arguments

`x` character; names of the cpt gradients.
`label` Logical, to show labels or not.

Value

names color matrix

Examples

```
{
  library(cptcity)
  show_cpt(find_cpt("radar"))
}
```
